ABSTRACTED-PUB-NO: JP10017475A

BASIC-ABSTRACT:

Lipid used in blood improving drug comprises phospholipid containing docosa-hexaenoic acid (DHA). Also claimed are food additives containing the above phospholipid.

The phospholipid preferably contains > 10 % phosphatidylcholine, phosphatidyl ethanolamine, phosphatidyl glycerol and/or phosphatidylserine. The amount of DHA in phospholipid is > 15 (preferably > 30) %. Phospholipid is obtained from the skin of squid. The amount of phospholipid in the drug is 0.1-50 (preferably 0.2-10) wt%. The food additives are added into soybean custard, fermented soybeans, bread, cakes, cookies, jelly, fish meat processed food, instant noodles, drink, cheese, butter, yogurt and meat processed food. The amount of additives in the food as DHA is 10 mg to 10 g/100g.

USE - The drug is used for the prevention and treatment of vascular diseases such as arteriosclerosis. The dosage of DHA is 1-1500 mg/day.

ADVANTAGE - Lipid in blood improving drug and food additives lowers total cholesterol and neutral lipid and increases high density lipoprotein cholesterol.
